

# Reficio Link™

## DBM Cortical Fiber Strips

DCI Donor Services Tissue Bank's advanced fiber technology combines the regenerative capacity of interconnected fibers with the maximum availability of growth factors endogenous to cortical bone. Prepared from 100% demineralized cortical fibers, Reficio Link™ DBM Fiber Strips offer an innovative solution for posterolateral spinal fusion and provide an ideal scaffold for the delivery of autologous stem cells.

- Maintains flexible yet cohesive handling characteristics for single or multi-level posterolateral implantation<sup>1</sup>
- Engineered for continuous, interconnected porosity and enhanced regenerative capacity compared to particulate DBM<sup>2</sup>
- Demineralized to expose native osteoinductive growth factors<sup>3</sup>
- Delivers osteogenic cells when hydrated with bone marrow aspirate<sup>4</sup>
- Proven regenerative capacity by exhibiting all five elements of new bone formation in a validated animal model<sup>5</sup>

Histological evidence of bone formation

DBM Strip	Size	Freeze Dried
	50 x 10 x 5 mm	27612918
	50 x 20 x 5 mm	27616218
	100 x 10 x 5 mm	27616118
	100 x 20 x 5 mm	27616318
